SUMMARY

Software Engineer with 4 years of experience building digital products and scalable systems from the ground up, grounded in strong algorithmic foundations and system design principles. Skilled in adapting to evolving tech stacks including modern web architectures, Agrotech, and Insurtech platforms with a focus on clean, scalable code. Passionate about integrating AI and autonomous agents to streamline development workflows and automate complex tasks. Driven by deep engineering curiosity to analyze, reason, and solve real-world problems through robust, end-to-end software solutions.

EXPERIENCE

Oct 2025 – Present

Althera
Product Engineer

- **Architected, built, and deployed end-to-end features** across internal systems and commercial client products, ensuring rigorous testing standards and high reliability.
- **Took full technical ownership** of the product lifecycle from initial architectural decisions to deployment driving continuous delivery and feature scalability.
- **Engineered multi-tenant SaaS platforms** and enterprise information systems, including custom management solutions for the real estate domain.

Dec 2025 – Jan 2026

Strive Services
Software Developer (Contractor)

- **Architected and developed the official website** and dynamic administrative dashboard for a game studio from scratch.
- **Engineered robust RESTful backend services** utilizing **Spring Boot** and **MongoDB** to handle asynchronous data and dynamic content.
- **Designed a reactive, modern frontend interface** with **Vue.js**, ensuring a seamless user experience and secure administrative state management.

Aug 2025 – Dec 2025

Ciaros
Software Developer (Contractor)

- **Engineered a comprehensive Insurtech platform** to streamline insurance policy workflows and automate complex commission settlements for sub-agents.
- **Automated billing and business intelligence operations** by implementing dynamic PDF invoice generation and real-time operational metric dashboards.
- **Built a responsive full-stack architecture** utilizing **Vue.js** on the frontend alongside an **Express/TypeScript** API backed by **MySQL** for high-integrity transactional data.

SKILLS

Vue.js 3

Java

Spring Boot

SQL

Git

Docker

Postman

EDUCATION

Feb 2023 – Dec 2026

UNICEN (National University of Central Buenos Aires)
Tandil, Buenos Aires · Associate Degree in IT Applications Development
